

Listing of Claims

The following listing of claims replaces all prior versions of the claims in the application.

1. (Previously Presented) A fuel cell bipolar plate comprising, in combination:
 - a first plate having a first surface, an opposing second surface, and a plurality of ribs defining anode flow channels on the first surface of the first plate;
 - a second plate having a first surface, an opposing second surface, and a plurality of ribs defining cathode flow channels on the second surface of the second plate, the ribs of the second plate having a height greater than a height of the ribs of the first plate such that the second plate can be nested with the first plate so as to define a plurality of center flow channels extending between the first and second plates;
 - a first edge area at one end of the first and second plates and a second edge area at an opposed end of the first and second plates;
 - a plurality of first internal fuel manifolds of unitary construction with the first and second plates and formed in the first edge area and in fluid communication with the center flow channels;
 - a plurality of second internal fuel manifolds of unitary construction with the first and second plates and formed in the first edge area and in fluid communication with the anode flow channels, and;
 - a turnaround plenum formed in the second edge area, the turnaround plenum in fluid communication with the center flow channels and the anode flow channels.
2. (Original) The bipolar plate of claim 1, further comprising a catalyst on the first surface of the second plate within the center flow channels.
3. (Previously Presented) The bipolar plate of claim 1, further comprising an aperture formed in the second edge area and fluidly connecting the turnaround plenum with the anode flow channels.

4. (Currently Amended) The bipolar plate of claim 1, wherein a portion of the second ~~end~~ edge area is folded over onto itself, and a spacer is positioned within the folded over portion.
5. (Original) The bipolar plate of claim 1, wherein the bipolar plate is comprised of a plurality of segments, each segment having a first internal fuel manifold and a second internal fuel manifold.
6. (Original) The bipolar plate of claim 5, wherein centers of the first and second internal fuel manifolds of each segment are on a line that extends substantially parallel to a flow path of the bipolar plate.
7. (Currently Amended) The bipolar plate of claim 1, further comprising a plurality of flat wires positioned on the first surface of the first ~~sheet~~ plate.
8. (Original) The bipolar plate of claim 7, further comprising an electrode positioned on the flat wires.
9. (Previously Presented) A fuel cell bipolar plate comprising, in combination:
a plate formed of a first plate and a second plate and comprising plurality of segments, the first plate having a first surface, an opposing second surface, and a plurality of ribs defining anode flow channels on the first surface of the first plate, the second plate having a first surface, an opposing second surface, and a plurality of ribs defining cathode flow channels on the second surface of the second plate, the ribs of the second plate having a height greater than a height of the ribs of the first plate such that the second plate can be nested with the first plate so as to define a plurality of center flow channels extending between the first and second plates;
a first edge area at one end of the first and second plates and a second edge area at an opposed end of the first and second plates;
a first internal fuel manifold of unitary construction with the first and second plates and formed in the first edge area of each segment and in fluid communication with the center flow channels;

a second internal fuel manifold of unitary construction with the first and second plates and formed in the first edge area of each segment and in fluid communication with the anode flow channels, and;

a turnaround plenum formed in the second edge area, the turnaround plenum in fluid communication with the center flow channels and the anode flow channels.

10. (Original) The bipolar plate of claim 9, further comprising a catalyst on the first surface of the second plate within the center flow channels.

11. (Previously Presented) The bipolar plate of claim 9, further comprising an aperture formed in the second edge area and fluidly connecting the turnaround plenum with the anode flow channels.

12. (Original) The bipolar plate of claim 9, wherein a portion of the second end area is folded over onto itself, and a spacer is positioned within the folded over portion.

13. (Original) The bipolar plate of claim 9, wherein centers of the first and second internal fuel manifolds of each segment are on a line that extends substantially parallel to a flow path of the bipolar plate.

14. (Currently Amended) The bipolar plate of claim 9, further comprising a plurality of flat wires positioned on the first surface of the first ~~sheet~~ plate.

15. (Original) The bipolar plate of claim 14, further comprising an electrode positioned on the flat wires.

16. (New) The bipolar plate of claim 7, wherein the plurality of flat wires are positioned substantially perpendicular to the anode flow channels.

17. (New) The bipolar plate of claim 14, wherein the plurality of flat wires are positioned substantially perpendicular to the anode flow channels.
